Week 4 Quiz

LATEST SUBMISSION GRADE
100%

1. The diagram for traditional programming had Rules and Data In, but what came out? **1 / 1 point**

- [x] Answers
- [ ] Binary
- [ ] Machine Learning
- [ ] Bugs

Correct

2. Why does the DNN for Fashion MNIST have 10 output neurons? **1 / 1 point**

- [ ] To make it train 10x faster
- [ ] To make it classify 10x faster
- [ ] Purely Arbitrary
- [x] The dataset has 10 classes

Correct

3. What is a Convolution? **1 / 1 point**

- [ ] A technique to make images smaller
- [ ] A technique to make images larger
- [x] A technique to extract features from an image
- [ ] A technique to remove unwanted images

Correct

4. Applying Convolutions on top of a DNN will have what impact on training? **1 / 1 point**

- [ ] It will be slower
- [ ] It will be faster
- [ ] There will be no impact
- [x] It depends on many factors. It might make your training faster or slower, and a poorly designed Convolutional layer may even be less efficient than a plain DNN!

Correct

5. What method on an ImageGenerator is used to normalize the image? **1 / 1 point**

- ○ normalize
- ○ flatten
- ○ rezize()
- ◉ rescale

✓ **Correct**

6. When using Image Augmentation with the ImageDataGenerator, what happens to your raw image data on-disk. **1 / 1 point**

- ○ A copy will be made, and the copies are augmented
- ○ A copy will be made, and the originals will be augmented
- ◉ Nothing
- ○ The images will be edited on disk, so be sure to have a backup

✓ **Correct**

7. Can you use Image augmentation with Transfer Learning? **1 / 1 point**

- ○ No - because the layers are frozen so they can't be augmented
- ◉ Yes. It's pre-trained layers that are frozen. So you can augment your images as you train the bottom layers of the DNN with them

✓ **Correct**

8. When training for multiple classes what is the Class Mode for Image Augmentation? **1 / 1 point**

- ○ class_mode='multiple'
- ○ class_mode='non_binary'
- ◉ class_mode='categorical'
- ○ class_mode='all'

✓ **Correct**
